

## Foggers

### FOGGING SYSTEM FOR OPTIMAL COOLING AND HUMIDIFYING OF GREENHOUSES

- Reduces greenhouse temperature
- Increases greenhouse humidity
- Superfine droplets evaporate before reaching the crop
- Perfect for plant propagation installations
- Use one fogger unit per 5m<sup>2</sup> for optimal cooling
- Available as 4 x 7 lph on cross

#### Micro Modular Performance table

Can be used with fogging controller with temperature and humidity sensors.

#### Droplet size

7l/h nozzle at 4 bar pressure will give 90 micron droplet size.

#### Pesticide Spraying

This system can also be utilised for spraying chemicals with very successful results.

#### Filtration

120 micron disk filter is required

LPD ( Leakage Prevention Device)

We supply two types of LPD, Black for low pressure and blue for high pressure.

#### Operating Pressure

Black LPD - Opening 2.0 bar and Closing 1.0 bar

Blue LPD - Opening 4.0 bar and closing 2.0 bar
